

ESTERER ALL-TYPE-DISPENSER

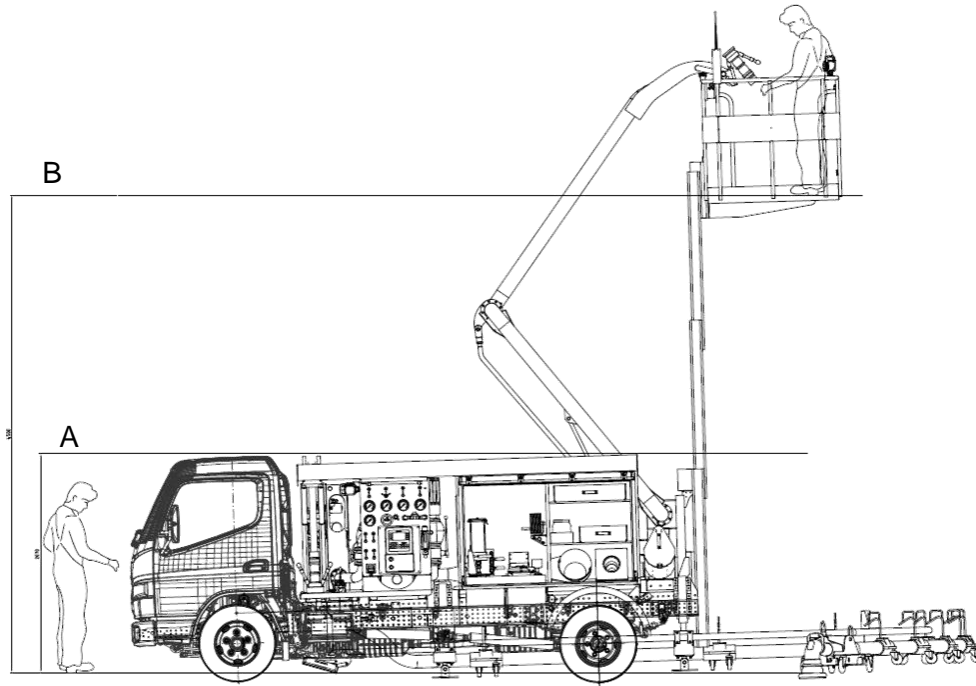

The development of our latest all-type dispenser offers total flexibility regarding the refueling of almost all types of aircrafts. With an initial height of 2.07 meters and the freely extendible platform with a working height of 4.5 meters, aircrafts with low wing heights can be refueled just as easily and reliably as the largest passenger aircrafts in the world.

The all-type dispenser is a solution that fulfills all the requirements of your dispensing vehicle fleet. It offers maximum utility as there is no need to change vehicles and refueling times are kept to a minimum. Besides considering how to achieve the greatest efficiency and cost-effectiveness, our engineers also keep the entire refueling process in mind at all times. Neatly and uniformly arranged display and operating elements minimize the number of operational errors and ensure a simple and safe refueling process. The entire input and output system is easy to use with minimum effort and has been designed to meet all performance requirements.

DVANTAGES

- one vehicle for low wing aircraft like B737-100 and high wing aircraft like B777-9
- faster refueling through deck hoses for low wing aircraft
- easy logistics
- ergonomic handling

The Esterer All-Type-Dispenser is your all in one solution for any aircraft.

TECHNICAL SPECIFICATIONS

| | |
|-----------------------------|---|
| performance | 1,200 liters per minute via hose reel 3,800 liters per minute via two deck hoses |
| chassis height (A) | 2,07m |
| maximum platform height (B) | 4,50m |

All components can be individually discussed and adapted to customer needs, please contact us for any further information.
